CWAZY AWARD OF THE

DE SWEIGS

Quakin' N' Shakin' For 28 Years FCC Operates Seismograph

# For University Of California

Each day, year around, a custodian descends into the basement of the Administration Building and changes the tapes on a small, sensative machine. And then, each week these tapes are packed into an envelope and dropped into a mail box.

It would seem that this would be a routine job since the machine has been there a long time. In fact, it was installed in 1935. This means that it has been performing its unique function for more than 28 years.

The instrument is a seismograph. Its function is to record vibrations, particularly the direction, intensity, and time of earthquakes.

#### Berkeley Requested

The instrument, operated and maintained for the University of California at Berkeley, Seismographic Department, was installed when Fresno State College maintained this campus. When FSC moved to its present location, Berkeley officials requested that they be allowed to keep the seimograph in its present location.

They explained that this was a

unique arrangement because the perform its other tasks, some of machine was situated in the area for the location of epicenters, the area of the earth's surface directly above the place of origin, or focus of earthquakes.

Considering the little maintenance and cost involved-it absorbs approximately the same amount of electricity required to burn a 100 watt light bulb-the Board of Education quickly gave their approval.

**Measures** Vibrations

As a result, the machine continues to measure vibrations and the building.

which remain classified. Although much of the information is restricted after evaluation by Berkeley officials, it is believed that the instrument plays an important role in determining the intensity of underground nuclear blasts.

University experts inspect the machine when results from the tapes produce unaccountable vibrations. Such an incident occurred not long ago when construction crews were working on

## Speed Demon Rapid Machine Shorthand Class Offered For First Time To Public

#### By GEORGE KUEMPEL

Worried about keeping ahead of a "fast-talking" boss on that future job? Relax! There is someone on campus who may have an answer to your problem. Her name is Mrs. Mary Miller, and she instructs Fresno City College's first machine shorthand class. In fact, it is the only class of its type offered by a public school in the

area. retaries and court reporters are able to reach dictation speeds superior to any type of shorthand, according to Mrs. Miller.

"A person who is able to type 50 words-per-minute on a typewriter, may expect to stenotype 250 words-per-minute-five times his typing speed," she said.

**Only Two Men Enroll** 

Of the ten students now enrolled in the class, two are men. One student who has had 14 years experience as a court reporter is taking the class to prepare herself for a teaching career in stenotype. Most students are seeking careers as legal secretaries and court reporters.

"There are many employment opportunities available for any highly skilled stenotype operator," Mrs. Miller said. She quoted a recent radio advertisement in which an employer offered \$9600 the machine, the operator is never yearly for skilled operators for under physical strain. court reporting.

The machine, weighing about two and one-half pounds, has two pre-requisites required for the banks of keys and a numeral bar. class is typing ability and a good The stenotypist utilizes both understanding of business English Oops, ran outa space, again. hands during operation. and correspondence. Shorthand ex-There are 23 letters which are perience is not necessary.

With training in stenotypy, sec- listed as initial consonants, vowels, and final consonants. Words are written according to sound. A les theory during half of the complete syllable then may be written with a single stroke.

#### Impressions Recorded

Impressions are recorded on small tapes, approximately two inches wide and six inches long, and are collected in a tray at the front of the machine.

To the untrained eye, the transcribed tapes resemble a chaotic mass of single letters strung out along an uneven margin.

#### **Never Grows 'Cold'**

In addition to the high speeds attainable, the stenotype is popular because its notes never grow "cold." This means that one stenotypist can easily read the notes of another-even after a number of years.

Another advantage is that, because of the precise adjustment of

#### No Experience Necessary

Mrs. Miller said that the only

The class, which meets two hours daily in Room A-211, studsession, and the remainder is devoted to lab.

Students are expected to be able to stenotype 80-100 words per minute at the end of the first semester. After a year, the goal is 150-175 wpm.

The class is equipped to accommodate 30 students- the number of stenotype machines furnished by the school. Most schools offering the class, require students to furnish their own machines.

Mrs. Miller stressed hope for a full class next semester and invited all interested students to contact her or drop by the class.

### **Fresno Hosts** Marketing Conference

"Because of the apparent lack of interest it is questionable whether or not the junior college marketing clubs will be affiliated into a state-wide organization," said Dr. Gilbert Peart, FCC marketing club advisor.

The marketing conference held in Fresno this past weekend to discuss the possibility was attended by only FCC and San Jose Junior College.

William F. Cross, employed by the Pacific Telephone and Telegraph Company; Mrs. Frankie Reynolds, of Gottschalks; and Karney Hodge, of Hodge & Sons; representing the three levels of management, spoke to the group.

The main topic brought out was that of a business trend to employ junior college students rather than four-year college students, since two-year college students are more willing to start at the bottom and work their way up.

According to George Craft, FCC Marketing Club president, the conference gave the attending students a chance to exchange ideas and for better student relations.

An employer-employee breakfast is scheduled by the club. for Nov. 12.

cation program aimed at acquaint- student to participate in a differing students with a variety of ath- ent physical activity each seletic activities has promoted a mester. stronger school spirit.

This is the opinion of FCC physical education instructors.

'We realize that a good physical education program is a definite objective in sound learning, and now, our physical facilities complement the training and the objectives of the instructors," said James P. Collins, dean of the letters, arts and sciences division. "Physical education offerings have definitely upgraded student spirit," he added.

The program, designed by the athletic department, got under-

A newly developed physical edu-| way this semester. It requires a

All PE activities now come under the head of aquatics, individual or dual activities and body mechanics. A fourth group, listed as an elective, allows a student in his fourth semester to continue in an activity of his choice.

This is to discourage students from attempting to fulfill PE requirements in one activity only.

**Has Advantages** 

"The main advantage in such a plan," according to head baseball coach Malcolm L. Bourdet, "is that it offers the students a more worthwhile program and acquaints them with other activities."

"We hope," he added, "that students will feel that this is their plan as well as ours."

Athletic director Hans Wiedenhoefer sees great hopes for the

students will gain better understanding of the school PE program.

## Leadership Conference Attended By Council
